

DIGITAL LITERACY PROJECT **REPORT**

Course Code: CSE0001

Course Title: Digital Literacy

Submitted by: Param Kaushik

Registration Number: 25BAI11522

Branch: B.Tech CSE (AI/ML)

Year: First Year

University: VIT Bhopal University

Date of Submission: 31/03/26

INTRODUCTION

This project is based on the concept of digital literacy, which is essential for students in today's technology-driven world. As a Student Digital Ambassador, the aim of this project was to understand and demonstrate how to use digital tools effectively, communicate professionally, and stay safe online.

The project consists of five tasks that cover important areas such as creating digital content, building a professional online presence, exploring coding and collaboration platforms, practicing email etiquette, and understanding cybercrime and online safety.

Through these tasks, I was able to gain practical knowledge and improve my digital skills. This project also helped me understand the importance of responsible and secure use of digital technologies in both academic and personal life.

TASK 1

For Task 1, I created a digital literacy awareness infographic using Canva. The purpose of this task was to present important concepts of digital literacy in a simple and visually appealing way so that it can be easily understood by students.

In the infographic, I included key topics such as the definition of digital literacy, useful digital tools for students, and safe internet practices. I used simple text along with icons and design elements to make the content more engaging and easy to read.

While creating the infographic, I found it interesting to explore different templates and design options available on Canva. One challenge I faced was selecting the right amount of content so that the infographic was informative but not overcrowded.

Overall, this task helped me understand how to present information effectively using digital tools and improved my design and communication skills.

DIGITAL LITERACY: YOUR SURVIVAL GUIDE

WHAT IS DIGITAL LITERACY?

Digital literacy is the ability to use technology effectively and responsibly. It includes finding information online, communicating digitally, and staying safe on the internet.

USEFUL TOOLS FOR STUDENTS

- Google Docs – for notes and assignments
- GitHub – to store and share projects
- Canva – for presentations and designs
- Google Drive – for file storage
- Zoom/Meet – for online classes

SAFE INTERNET PRACTICES

- Use strong passwords and don't share them
- Avoid clicking on unknown links
- Don't share personal information online
- Check if websites are secure (https)
- Be careful on public Wi-Fi

TASK 2

For Task 2, I built my student digital portfolio by creating profiles on GitHub, LinkedIn, and Kaggle. The aim of this task was to establish a professional online presence that can be useful for academic and career growth.

GitHub is a platform used to store and manage coding projects. I created my profile and added a README to introduce myself. LinkedIn is a professional networking platform where I added my education details to connect with peers and professionals. Kaggle is a platform for data science and machine learning, where I created a basic profile to explore datasets and learning resources.

Through this task, I understood the importance of maintaining a professional digital identity. In the coming years, I plan to use GitHub to showcase my projects, LinkedIn to build professional connections, and Kaggle to improve my skills in data analysis and machine learning.

This task helped me take the first step toward building a strong online presence.

For Task 3, I explored coding and collaboration platforms by completing a beginner-level coding challenge on HackerRank and creating a Google Form for a digital literacy quiz.

On HackerRank, I solved a basic problem which helped me understand how coding platforms work and how problems are structured. It gave me practical experience in writing and submitting code, which is useful for improving programming skills.

For the collaboration part, I created a Google Form consisting of five questions related to digital literacy. The form included both multiple-choice and short answer questions. I also linked the responses to a Google Sheet, which helped me understand how data can be collected and analyzed efficiently.

This task was helpful in learning how online platforms can be used for both practice and collaboration. These tools will be useful in my academic journey, especially for coding practice, conducting surveys, and working on group projects.

TASK 4

For Task 4, I learned about professional email communication and responsible use of social media. I wrote two formal emails, one requesting an assignment deadline extension and another expressing interest in a summer internship. This helped me understand the importance of proper structure, tone, and clarity in professional communication.

A common issue in digital communication is sending informal or unclear messages, which can create misunderstandings. For example, a student sending a casual or incomplete email to a professor may not receive a proper response. This can be avoided by using a clear subject line, polite language, and a well-structured message.

I also created a checklist of do's and don'ts for social media use, which emphasizes responsible and safe online behavior. This task improved my communication skills and awareness of digital etiquette.

Social Media Do's:

- Keep your profile professional
 - Think before posting
 - Respect others online
 - Use privacy settings
 - Share useful content

Social Media Don'ts:

- Don't share personal information
 - Don't post offensive content
 - Don't engage in cyberbullying
 - Don't click suspicious links
- Don't overshare daily activities

TASK 5

For Task 5, I explored cybercrime awareness by studying a case related to UPI fraud. While researching this topic, I was surprised to learn how easily people can be tricked into sharing sensitive information or approving fraudulent transactions. Many scams appear genuine, which makes them difficult to identify, especially for unaware users.

This task helped me understand the importance of being cautious while using online payment systems and digital platforms. I also created a prevention checklist that highlights simple but effective safety measures such as not sharing OTPs, verifying payment requests, and avoiding suspicious links.

As a result of this task, one habit I will change is being more careful while handling online transactions and always verifying the authenticity of requests before taking any action. This task increased my awareness of online threats and how to stay safe.

CONCLUSION

This project provided valuable insights into the importance of digital literacy in today's world. Through the various tasks, I learned how to use digital tools effectively, build a professional online presence, and communicate responsibly. I also gained awareness about online safety and cybercrime prevention. Overall, this project helped me improve my practical skills and understanding of digital platforms, which will be beneficial in my academic and professional journey.
